

2019 Farm-City State Poster Contest

The Alabama Farm-City poster, essay and multimedia theme for 2019 is **“Keep Alabama Growing.”**

How do agriculture and forestry “Keep Alabama Growing?”

Besides the obvious answers related to production of food and fiber and preservation of green space, this year’s Farm-City Week theme provides hints to the contributions agriculture and forestry make to the state’s economy, workforce, nutrition and society.

American Farm Bureau Federation recently released its Feeding the Economy study, which showed Alabama’s agriculture and food industries account for more than 312,000 direct jobs; \$8 billion in wages; \$34.7 billion in economic output; \$8.3 billion in business taxes; and \$551.6 million in exports. When indirect jobs are counted, employment jumps to more than 579,000, and output exceeds \$83.8 billion.

These impacts demonstrate how agriculture and forestry play an important role in Alabama’s vitality, despite declining farm numbers. According to the 2017 Census of Agriculture released this year, the state’s total number of farms declined to about 40,000, a loss of 2,600 farms since 2012. Total land in farms also was down slightly. Meanwhile, the market value of crops and livestock increased.

In short, fewer farmers are producing more food and fiber on less land with fewer inputs. They’re helping to “Keep Alabama Growing.”

Agriculture and forestry contribute to our health, nutrition and comfort. Alabama farmers provide food and fiber for children and families here and around the world. From fresh produce at local farmers markets to lean beef, pork, poultry and catfish, Alabama grows a bounty of wholesome foods. The state’s fields yield grain, soybeans and forage for feed; fluffy white cotton for clothing and linens; and flowers, shrubs and sod to beautify homes and businesses.

Farmers also keep Alabama’s natural resources growing. They provide habitat for woodland creatures, wetlands for waterfowl, and forestland for hunting, recreation, timber and more. Modern agricultural practices conserve water and reduce erosion. Precision agriculture also uses less fertilizer, fuel and pesticides while improving soil health.

The high-tech world of farming speaks to another contribution agriculture and forestry make to our society. For centuries, farms have been incubators for innovation. The innate ingenuity, independence and resilience of farmers fuels development of new products and practices.

Farmers also “Keep Alabama Growing” through their values and service. Faith, family, citizenship, stewardship and being a good neighbor are as common in agriculture and forestry as tractors and trucks.

Whether students focus on the economic and environmental impacts of farmers or the diversity and innovation in agriculture, they’re sure to discover many ways farming and forestry “Keep Alabama Growing.”
